

Rubric Data Storytelling and Data Visualization

Group (nr):

Name student 1:

Name student 2:

COMPONENT	SUBCOMPONENTS	DESCRIPTION	GRADE			
			GOOD (10 Points)	SUFFICIENT (8 Points)	MODERATE (6 Points)	POOR (2 Points)
Data Storytelling (50%)	Context (20%)	Specific to target audience Clear key messages Suitable for low data literacy				
	Storytelling (30%)	(a) Convincing story Problem context, background, motivation Actionable outcomes Addresses reliability				
	(a) Convincing story (20%) (b) Creative storytelling (narration, story tactics) (10%)	(b) Creative storytelling Creative structure / flow Story tactics / narration / headings Aesthetics and design support appeal & ease				

COMPONENT	SUBCOMPONENTS	DESCRIPTION	GRADE			
			GOOD (10 Points)	SUFFICIENT (8 Points)	MODERATE (6 Points)	POOR (2 Points)
Data Visualization (50%)	Choosing effective visuals (20%)	Choice of visuals fitting to message and mental workload				
	Removing clutter (10%)	Clear effort to remove or avoid clutter / noise				
	Focus on the audience's attention (20%)	Use of pre-attentive attributes (size, color, shape, etc.) - Strategically directs attention - Effectively reduces cognitive load				

Rubric explanation and description

COMPONENT	SUBCOMPONENTS	DESCRIPTION
Data Storytelling (50%)	Context (20%)	Shows a good understanding of who the target audience is, what key messages to convey them (selecting the 2 pearls out of 100 oysters), and how to address this audience (to a target audience of low data literacy , e.g., does not use terminology that are not understandable to this audience)
	Storytelling (30%)	(a) The story is convincing and data-driven: - Provides convincing context/background/motivation about the problem possibly with desirable outcomes, uses carefully selected results in a sensible and convincing way to strengthen the story, provides actionable recommendations . Pays attention to the reliability of the results.
	(a) Creating a convincing story (20%) (b) Creative storytelling (tactics, structure, emotion, affordances and aesthetics) (10%)	(b) Creative storytelling: -Uses good story tactics (e.g., directly addressing audience, headings, strategic use of repetition) -Creative and effective design of storyline / structure. -Effective appeal to emotion . - Visual affordances and aesthetics : overall easy to follow and interpret with low cognitive load.

COMPONENT	SUBCOMPONENTS	DESCRIPTION
Data Visualization (50%)	Choosing effective visuals (20%)	-Chooses the right types of visuals (simple text, scatterplot, line graph etc.) to match the data/ statistics/ information/ key messages they represent. -Visuals are selected in a way that they require less cognitive processing and mental workload (e.g., by trying to align visuals with how people naturally perceive).
	Removing clutter (10%)	-Carefully and sparingly selects a minimal set of visual elements that contributes to the key message. -Strategic and sparing use of white space, contrast, grid lines, and other chart elements. -Takes care of the order, structure, and alignment of visual elements on the slide.
	Focus on the audience's attention (20%)	Uses pre-attentive attributes (such as size, color, shape, orientation, etc.) of visual elements strategically to (a) direct the attention of the audience to what you want them to pay attention at a given moment; (b) help audience process information easily and with a low cognitive load (e.g., by creating a visual hierarchy of information)
